

Skincare Formulation

REGAIN THE DELICATE HANDS

SIX FEATURES INVITE YOU TO EXPERIENCE

Exclusive Hydrogel Coating Technique

Wet Donning: Inner Smooth/Outer Dry, wet donning for more timely patient care! Effectively enhances or maintains the surgical doctor's tactile sensitivity during procedures!

Skincare Formulation

The proprietary Gdc-Slem™ technique in the gloves helps to retain skin moisture, provides deep relief for dry, peeling, and irritated skin, and assists in improving hand health while wearing gloves.

Double Gloving

Global Safety Trends
Gloves in deep blue can be worn as inner gloves when used in double-gloving. Users can easily detect perforations on the outer layer, reducing the risk of sharp instrument injuries. Additionally, the skincare formulation within the gloves provides enhanced moisturization for your hands.

Proprietary OC Technology

With low protein, low conductivity, products are softer, more conforming, and provide better tactile sensation, making them ideal for high-precision medical procedures!

Blister Pouch

Safer: Easily visual inspect for package integrity, ensuring the sterility and more hygienic products! Airtight packaging for easier storage and no paper scraps when opening.

Purity

Reduced additive chemical usage results in fewer residues in the glove, making it cleaner. With a higher proportion of natural latex, it boasts greater purity, a softer touch, and enhanced comfort when worn!

The proprietary Gdc-Slem™ formulation retains moisture in the epidermis, improving skin texture and complexion.
